

METHOD FOR PARALLEL SEARCHING IN VPI/VCI LOOK-UP TABLE

ABSTRACT OF THE DISCLOSURE

00698728.102700
5 A method and system are disclosed for parallel searching a table by first breaking the larger table into a plurality of smaller subtables. Once the larger table has been subdivided into subtables, all the subtables are searched simultaneously (in parallel). When a match is detected, a predetermined operation is performed.
